# BANKING on a Modern Core

# FAQS | Selected Highlights

## **Is Nymbus engaging with/implementing industry standards for secure data sharing like FDX? If so, when will these be available to the community?**

Nymbus provides various options for data access and is flexible on how a customer wants to consume or retrieve that data. Our software provides configurable event-driven extracts that can be automated to feed data between systems on a schedule or near real-time as file movements, API endpoints, or data streams.

A configurable experience API layer is also provided following typical industry standards such as OAuth authentication, Open API specifications, API testing portal, etc.

API sets are broken up by use case, such as customer or account information, 3rd-party integration, such as Plaid, or pushing data into the Core. Some APIs follow the FDX standards where it is a good fit for the use case, but the full FDX specification is not supported.

## **What is Nymbus' approach to, and status of, open APIs, including thw approach to data aggregators and the extent to which the company supports a move to secure (API-based) methods for consumer-authorized data sharing?**

We believe that your bank data belongs to you. That is why all data within the Nymbus platform is accessible to your institution. All data can be reported on, and is available via the Nymbus Core APIs. If the necessary API does not currently exist in our catalog, one can be created.

As specified above, API sets are broken up by use case, such as customer or account information, 3rd party integration such as Plaid, or pushing data into the Core.

## **What are Nymbus' contract provisions surrounding:**

- **Exclusivity**
- **Coterminous contracts**
- **Deconversion fees**
- **Limitation of liability**
- **Service level agreements**
- **Early termination penalties**

Nymbus does not require exclusivity provisions. Our Core contracts include Core, Digital Banking, Onboard, and Lend, and the Nymbus products are coterminous with each other. While we hope that you'll never need to leave, our deconversion fees are based on time and materials on published hourly rate. There are no exit barriers.

Limitations of Liability are variable, negotiated with each customer, and could be in months, 1 year, or term of contract. Detailed SLAs and remedies are included in all contracts. We include prorated early termination fees based on the term (years) of the contract.
